All you need to know to apply

# Decarbon Discounts

If you're working on energy solutions that address the problem of energy generation or management to mitigate climate change, EIP Decarbon Discounts is for you.

Go beyond simply protecting your intellectual property. Work with patent attorneys who understand you and share your ideals.

## What can you get?

- A discount of £600 at the drafting stage.
- A discount of £300 for reviewing the first set of search results.
- A discount of £300 for reply to the first examination report.

Capped at £1,200 total discount per patent family. This equates to a discount of around 10% for a case that is not filed widely.

No charge for any advice relating to acceleration of patent applications due to environmental technology (e.g. UKIPO Green Channel, USPTO Climate Change Mitigation Pilot Program).

## How do you qualify?

You're eligible if you're an existing client or a new client that we are able to act for (subject to conflict checks and other due diligence).

Your invention can qualify if it addresses the problem of energy generation or management (e.g. smart grids, batteries for managing renewal energy sources etc.) in a way that helps mitigate climate change.

Step 1: Book a 1-hour free consultation to find out if your IP is relevant to Decarbon Discounts and to talk about protection. To do this, get in touch with your main EIP contact or email [decarbon@eip.com](mailto:decarbon@eip.com).

Step 2: Submit an invention disclosure with a brief explanation of the benefits of the invention.

Step 3: The invention disclosure will be reviewed by our Environmental Sustainability team. The team will assess the invention for its benefit in addressing the energy problem.

Step 4: If your invention is accepted for the Decarbon Discounts EIP might like to help publicise your invention. This is flexible and something we will discuss with you in advance.

If you have questions, please get in touch with your main EIP contact or email [decarbon@eip.com](mailto:decarbon@eip.com).
